RTM is a new concept in aerial mapping that can give your firm the competitive edge you need, both in delivery time and price. Imagine having your mapping done in less than 15 days at discount prices driven by consolidated group buying power.

Bradstreet Consultants, Inc. acquired and controlled nearly 6,000 aerial photographs at 1"=600' in the York and Cumberland County areas. We have also established over 700 new surveyed control points in over 50 cities and towns in southern Maine. Should you just need a few of our aerial target coordinate sets,

RTK GPS – Supporting Aerial Mapping

these control points will “get you on State Plane” quickly. If you would like a library or town-wide control coverage, this will allow you to “own” a specific area by having a unique evenly spaced, robust control network.

State-wide coverage, you ask? We recently acquired the State of Maine library of aerial photos (over 5,000) from the USGS. This photography @ 1"=1,000 and 1"=2,000 can jump start a project by providing a quick, inexpensive planimetric (1"=200') and topographic (5' contours) map that can be added to the necessary surveying usually done for the layout of roads in subdivision sites.
